**EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Scott D. Paul on September 8, 2008.

The application has been amended as follows:

As per claim 14, at pg. 4, line 7, replace "alert." with –alert;–

Cancel claims 1 and 18.

***Allowable Subject Matter***

2. The following is an examiner's statement of reasons for allowance: Applicant's claimed invention discloses, inter alia, a publish/subscribe message dissemination service having means for generating and forwarding an alert matched with a received message and at least one subscriber program. The prior art discloses a similar device; in particular:

3. Rothfus et al. US 6,044,372 discloses an apparatus for publishing information to subscribers using handles, which define different topics; each topic is further separated

or divided into subject categories. Col. 8, line 35-9, line 12. The apparatus includes a reaction means to produce a predefined action in response to an event by defining an event type and filter conditions set by a user. Col. 12, lines 8-67. Moreover, Rothfus discloses only an authorized user can view the handles within a webpage. Col. 3, lines 40-45 and claim 28.

4. Moreh et al. US 6,158,007 discloses a security system to communicate messages between a publisher and a subscriber, the system including security policies and access control lists to limit the dissemination of messages to authenticated subscribers, and protection mechanisms to secure the messages. Col. 10, lines 6-12; 12:55-13:25; figs. 5a, 5b and 9.

5. Horvitz et al. US 6,980,993 discloses a notification platform handling notifications based on user subscriptions and controls; a notification schema represents information metadata, which defines user devices that are enlisted by a service; an information agent service uses the metadata to determine information handling and alerting. Col. 2, line 7-col. 2, line 17; Cols. 32-35, TABLE 1A.

6. Tu et al. US 20020154010 discloses an event notification system, whereby an agent monitors data indicating one or more events associated with the data; messages are sent according to notification preferences when specified sets of events are detected. Notification preferences include what message should be sent and to which subscribers the notification should be sent. Paragraphs 97-101.

7. However, none of the prior art of record, either alone or in combination suggest, inter alia, the following limitations: rules procedures for generating and determining

required dissemination of alerts are stored in association with the message topic information, wherein the one or more matcher components are adapted to identify a relevant rules procedure by reference to the message topic information and to forward to the identified rules procedure: a message subscription list; a list of authorized recipients; and an identification of one or more subscribers for alerts; and means for performing an authorization check to identify a subset of the identified one or more message subscriber programs which subset of programs is authorized to receive the message. Hence, claim 14 is allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
